PROGRESSIVE LENSES VS. BIFOCALS. Bifocal lenses only allow you to clearly see far away and up close. Objects at arm's length will still appear blurry. Additionally, there is an abrupt change between the near and far viewing areas. Varilux progressive lenses provide sharp vision and smooth transitions at any distance.

[Side Effects of Progressive Lenses - Essilor Eyeglass Lenses](#)

Progressive lenses, such as Varilux, have no lines separating the different lens strengths, yet they provide the user with clear vision at all distances, allowing both head and eyes to stay in a natural and comfortable position when looking at objects in the distance, the intermediate zone and close up. This means no abrupt changes in lens strength, and no need to compensate with unhealthy ...
